Chem. Res. 138:910-936(1993).

-!- FUNCTION: Antibacterial peptide, that adopts an conformation which can disrupt bacterial membra: displays a different antimicrobial specificity.
-!- SUBCELLULAR LOCATION: Secreted protein.
-!- TISSUE SPECIFICITY: Expressed by the skin parote
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 P56244;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             PATENT NO. 669251

GENERAL INFORMATION:
APPLICANT: Quax, Wilhelmus J.
APPLICANT: Kerkman, Richard
APPLICANT: Broekhuizen, Cornelis P.
TITLE OF INVENTION: No. 6692951el Secretion Factors for
TITLE OF INVENTION: Gram-Positive Microorganisms Genes
TITLE OF INVENTION: of Using It
FILE REFERENCE: GCX322-US

Althaus H;

WPI; 2004-073743/08.

New antibody specific for carbohydrate-deficient transferrin, useful for diagnosis of alcoholism, can bind its target in solution, eliminating need for immobilization.

Claim 4; SEQ ID NO 3; 21pp; German.

This invention describes a novel antibody that, in aqueous solution, binds selectively to carbohydrate-deficient transferrin (CDT) without having to bind CDT to a solid phase. The invention also describes an antibody that binds selectively to CDT at regions containing the sequences VVARSMGGKEDLIWELL, TTEDSIAKIMNGEADAMSLDGGF, SKLSMGSGLNLSEPN and YEKYLGBEYVKAV (ADG46075-ADG46078) and an immunoassay for detecting CDT using the antibodies of the invention are monoclonal, specifically from hybridomas DSM ACC2540 or 2541. The antibodies are obtained by immunisation with non-glycosylated transferrin, or a fragment, then generation of hybridomas by standard fusion of spleen and myeloma cells. Hybridomas are then selected for

This invention describes a novel antibody that, in aqueous solution, CC binds selectively to carbohydrate-deficient transferrin (CDT) without chaving to bind CDT to a solid phase. The invention also describes an CC antibody that binds selectively to CDT at regions containing the CC sequences VVARSMGGKEDLINELL, TTEDSIAKINMCEADAWSLDGGF, SKLSMGSGLINLSERN and CC YEKYLGEEYVKAV (ADG46075-ADG46078) and an immunoassay for detecting CDT CC using the antibodies of the invention. The antibodies of the invention CC are monoclonal, specifically from hybridomas DSM ACC2540 or 2541. The CC antibodies are obtained by immunisation with non-glycosylated for CC transferrin, or a fragment, then generation of hybridomas by standard CC fusion of spleen and myeloma cells. Hybridomas are then selected for production of spleen and myeloma cells. Hybridomas are then selected for CC phase. The antibodies that specifically bind CDT from the aqueous CC phase. The antibodies are useful for diagnosis of alcoholism, CDT, which CC alcoholics. The antibodies allow direct detection of CDT in solution, CC alcoholics. The antibodies and/or Assam 611, is present only in CC alcoholics. The antibodies and of crompticed of the solution, and the need for immobilising it on a solid phase (as required companions) and the need for immobilising it on a solid phase (as required companions) and the processor would be a companion of the processor would be a companion of the processor would be a companion of the processor would be companioned to the solid phase (as required companions). Abg46075-Abg46094 represent CDT peptide
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       production of antibodies that specifically bind CDT from the aqueous phase. The antibodies are useful for diagnosis of alcoholism, CDT, whice lacks glycosylation at Asn413 and/or Asn 611, is present only in alcoholics. The antibodies allow direct detection of CDT in solution, eliminating the need for immobilising it on a solid phase (as required when using known antibodies). ADG46075-ADG46094 represent CDT peptide fragments used in the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 15

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 S
diagnostic markers for a disease, a composition comprising peptides containing the glycosylation sites (AEESS97-AEE39378, where the peptides each correspond to peptide fragments derived by cleavage of polypeptides using the same cleavage reagent) and a kit comprising peptides containing the glycosylation sites (AEESS97-AEE39378). The methods are useful for identifying glycopolypeptides in a serum or plasma sample. The methods can be used for blood serum profiling for the detection of prognostic and diagnostic protein markers. It can also be used to identify and/or validate drug targets and to evaluate drug efficacy, drug dosing, and/or drug toxicity. The methods can also be used for the detection of changes in the state of glycosylation of protein based on the concurrent peptication of protein abundance measurement of protein glycosylation of the same sample. The method allows fast throughput and simplicity. It can be readily adapted for high throughput analysis of samples, which can be particularly advantageous for the analysis of samples, which can be particularly advantageous for the analysis of clinical specimens. The method can also be automated to facilitate the processing of multiple method can also be automated to facilitate the processing of multiple
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Query Match

The invention relates to identifying glycopolypeptides in a serum or CC plasma sample comprising immobilizing derivatized sample glycopeptide (CC glycopolypeptides to a solid support, releasing the sample glycopeptide (CC glycopeptide fragments standard peptides, and identifying released sample CC glycopeptide fragments that correspond to standard peptides added by mass cCC glycopeptide fragments that correspond to standard peptides added by mass cCC glycopeptide fragments that correspond to standard peptides added by mass cCC containing the glycosylation sites (AEE35897-AEE39178, where the peptides cCC containing the glycosylation sites (AEE35897-AEE39178, where the peptides cCC can be used for blood serum profiling for the detection of polypeptides (AEE35897-AEE39178). The methods are useful for cidentifying glycopolypeptides in a serum or plasma sample. The methods can also be used for the detection of changes containing the glycopolypeptides in a serum or plasma sample glycopolypeptides in a serum or plasma sample and/or containing the glycopolypeptides in a serum or plasma sample containing cCC diagnostic protein markers. It can also be used to identify and/or changes the state of glycopylation of proteins based on the concurrent cCC application of protein abundance measurement of protein glycosylation on the same sample. The method allows fast throughput and simplicity. It can be readily adapted for high throughput analysis of samples, which can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁

transferrin protein exhibiting reduced glycosylation fused to at least one antibody variable region. The invention may be useful for the development of compounds with cytostatic, antibacterial, virucide, antiparasitic, immunosuppressive or antiarthritic activity. In addition, the sequences disclosed may be useful for gene therapy. The fusion protein is useful for preparing a composition for treating a disease or disease symptom in a patient for example septic shock, endotoxic shock, cachexia syndromes associated with bacterial, viral or parasitic infections, neoplasm, autoimmune disease, arthritis or adverse effects associated with treatment for preventing graft rejection. The present sequence is that of a domain of the human transferrin protein which was used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New fusion protein comprising a transferrin protein exhibiting reduced glycosylation fused to at least one antibody variable region, useful for preparing a composition for treating e.g., septic shock, neoplasm or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               30-AUG-2001; 2001US-0315745F.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             particularly advantageous for the analysis of clinical specimens. The method can also be automated to facilitate the processing of multiple samples. The present sequence is a human glycopeptide that does not contain an N-linked glycosylation site, suitable for use as a reference
                                                                                                                                                                                                                                                                                                                                                                                                                           Example
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      autoimmune disease.
